

THE PROFLORA™ CALF DIFFERENCE

The next generation of probiotic capsules

The stress from calving, temperature fluctuations, exposure to pathogens, and other environmental factors during the first month of life can put calves at risk of disease and poor weight conversions.

Proflora Calf is 100% made in Canada with patented microencapsulation technology. It contains a research-backed combination of Pre and Probiotics, Postbiotics, and vitamins to support gut microflora in pre-ruminant calves.

The ProFlora™ Calf Capsule can also be used for sick, stressed, and off-feed calves.

BioFer Science Inc

BioFer Science Inc. is an innovative company based in London, Ontario that is capable of fermenting and microencapsulating highly concentrated probiotics and postbiotics that naturally support animal health, immunity, and performance. We take great pride in providing live strains that are virus-free, harvested for quality rather than quantity, and microencapsulated to ensure the highest productivity when they are fed.

BioFer Science has conducted research and on-farm trials and has achieved very positive results in both production and gains. We are proud to supply easy-to-use capsules that will improve output and animal health.

Postbiotics

Postbiotics are the results of probiotic activity in the gut and have great benefits for immune function and overall health.

Healthy digestive systems will produce small amounts of postbiotics naturally. When animals become stressed, or require antibiotics, the digestive biome becomes imbalanced and requires intervention.

The microencapsulated concentrated PostBiotics made in the BioFer Science lab are the perfect solution. The levels found in the cattle capsules give the gut a significant boost allowing it to rebalance efficiently.
