

PROFLORA™ Sheep and Goat Capsule

The PROFLORA™ S&G difference

ProFlora S&G Capsule is the only small ruminant capsule that improves production and profitability. With 100% made in Canada patented microencapsulation, it contains a research-backed combination of Pre and Probiotics, Postbiotics, and Vitamins. Because there are many stresses from birth, temperature change, exposure to pathogens, and other environmental factors, ProFlora S&G Capsules are what fresh sheep and goats need to quickly resume production.

BioFer Science Inc

BioFer Science Inc. is an innovative company based in London, Ontario that is capable of fermenting and microencapsulating highly concentrated probiotics and postbiotics that naturally support animal health, immunity, and performance. We take great pride in providing live strains that are virus-free, harvested for quality rather than quantity, and microencapsulated to ensure the highest productivity when they are fed. BioFer Science has conducted research and on-farm trials and has achieved very positive results in both production and gains. We are proud to supply easy-to-use capsules that will improve output and animal health.

Postbiotics

Postbiotics are the result of probiotic activity in the gut and have great benefits for immune function and overall health. Healthy digestive systems produce small amounts of postbiotics naturally. When animals become stressed or require antibiotics, the digestive biome becomes imbalanced and requires intervention. BioFerScience produces PostBiotics in the lab and microencapsulates the concentrate. The levels found in the S&G capsules give the gut a significant boost allowing it to rebalance efficiently.

The Next Generation in Transition Capsules

Microencapsulation

Creating Ultimate Efficiency. Beneficial microorganisms, like those found in ProFlora S&G Capsule, are extremely sensitive to oxygen, moisture, and heat. Since these are common conditions in the manufacturing and packaging processes, the beneficial colony-forming units can be significantly affected. Microencapsulation allows the bacterial colonies to withstand these factors during processing, mixing, and packaging, to provide a stable, concentrated, product that meets or exceeds the labelled amount. The special technology developed by BioFer Science is a double-coated encapsulation that protects bacterial cells and their metabolites to keep them fresh and efficient to the last scoop.

PROFLORA™

Probiotics, Postbiotics & Vitamins

16 billion CFU probiotics/2.53 g Capsule

Net Contents

16 capsules

Ingredients per 2.53 g capsule

Pediococcus acidilactici: 4 billion CFU/UFC
Lactobacillus casei: 3.2 billion CFU/UFC
Enterococcus lactis: 1.8 billion CFU/UFC
Lactobacillus plantarum: 3.4 billion CFU/UFC
Lactobacillus acidophilus: 1.8 billion CFU/UFC
Lactobacillus fermentum: 1.8 billion CFU/UFC

Microbial composition

Vitamin A: 81 mg	Thiamine: 1.2 mg
Vitamin E: 200 mg	Vitamin D3: 2 mg
Vitamin B2: 1.2 mg	Zinc sulfate: 35 mg
Vitamin B3: 1.2 mg	Yeast Extract: 678 mg
Vitamin B12: 1.2 mg	Aspergillus oryzae: 678 mg
Folic Acid: 1.2 mg	

Directions

Administer TWO capsules ONCE daily for TWO days at lambing/kidding. The S&G capsules can also be given to sick, stressed, and off-feed sheep and goats at this dosage. ProFlora™ Sheep & Goat Capsule is recommended once daily during antibiotic therapy.

ONE CAPSULE PER DAY FOR THREE DAYS.
